Decarbonization in maritime logistics, as part of the major challenges and trends in the industry

By Ricardo J Sanchez & Rodolfo Sabonge

Within the framework of a reflection on decarbonization, it is necessary to review the main changes that have occurred in recent times, and those that could be foreseeable in the future, in maritime logistics. The rationale behind this statement is that nature, the action of mankind on nature, the interaction within societies, and of these with others that make up the world, cannot be considered in isolation, since the changes that occur in behaviors and actions across the planet have multiple repercussions, and there are no sectors of the world exempt from such influences.
